SVN Manager

Descripción

Path: “Window/Extensions/CG PsT – SVN Manager”

Description

Panel that allows update and commit changes of a SVN repository.

Requirements

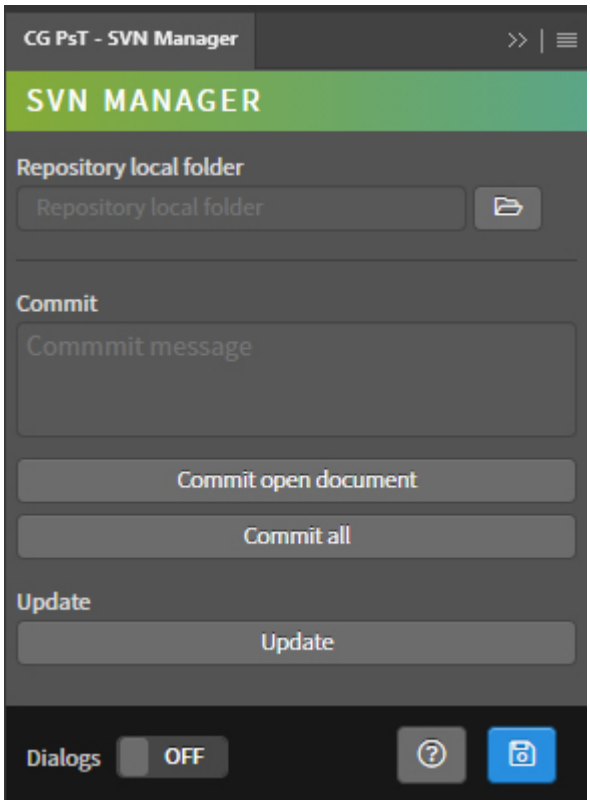

Before use the panel you must install the requirements:

- Python 3.x (only on MacOS, MacOS has preinstalled on Python 3.x)
- SVN
  - Microsoft Windows – Subversion 1.14.1
  - Mac OS 10.13 – Subversion 1.11.0 or the version that matchs with your Mac OS version:
    - Run this command on terminal to show the hidden files: `defaults write com.apple.finder AppleShowAllFiles -boolean true; killall Finder;`
    - Go to “/private/etc/” folder and open the file “paths” wiht a text editor.
    - Abb this text at the bottom of the file “/opt/subversion/bin” to include the SVN as an environment variable. This environment variables are only used by the Terminal app not other apps like Photoshop.

Limitations

Does not support paths or file names with special characters like “ç” or letters with accents like «á».

Reference

- **Repository local folder** – Path of the repository folder. It is the folder with inside the hidden folder called ".svn". It can be edited from the input field or using the folder selection window.
- **Commit** – Commit related actions.
  - **Commit message** – Text message for the commit.
  - **Commit open document** – Commit changes on the current open document.
  - **Commit all** – Commit changes on all the files of given respository.
- **Update** – Update related actions.
  - **Update** – Update changes to and from remote repository.
- **Dialogs** – Show dialog messages with useful information during the execution of the panel.
- **Help** – Open the CG Ps Tools online manual.
- **Save** – Save the active document.

Use

Open a document, then set the path of the local folder of the repository and use the buttons to run the desired action. Obviously, the document must be inside the repository folder.
